Call For Papers

The demand and opportunity to put SmallSat's in orbit is continuing to grow, especially at the micro and nano-scale. SmallSats are a key factor in space sustainably, both in providing solutions and potentially contributing to the problem. As there are more constituents actively using space for security and socio-economic benefits, with a crowding of physical and broadcasting interference, the greater the concern becomes.

To position Canada to provide solutions and technologies to mitigate concerns, the CSCA is bringing together stakeholders from across the country and inviting international participation to provide a forum for discussion and collaboration.

Submission deadline is July 21, 2017

Notification will be by August 14, 2017

For more information and to submit, go to : smallsat.ca

Topics of Interest, focused on SmallSats, are (but not limited to):

- ✦ Earth Observation
